

Driving progress in the state of Oklahoma

A hundred years ago, this was a full-service garage. Instead of socket wrenches and hydraulic lifts, brooms and shovels were standard tools of the trade. Since then, things have changed a bit. At Oklahoma Technology Centers, we're proud to train the skilled workers that drive progress in our state. From construction technologies to computer repair to automotive maintenance, we offer educational programs on the cutting edge of science. We prepare our students for exciting, profitable careers in a wide variety of fields. By supplying businesses with the skilled workforce they need to succeed, we encourage economic growth in Oklahoma. Oklahoma Technology Centers. We transform our students. They transform the world.
