

# Setting a course for your success

A hundred years ago, this was the L.A. to New York. Back then, coast-to-coast travel wasn't a convenience - it was an adventure. Today, spaceports and commercial spacecraft are laying the foundation for an amazing future in global travel. At Oklahoma Technology Centers, we're proud to launch our great state on the trajectory of success. We propel our students toward profitable careers in environmental services, electronic assembly, aviation maintenance and much more. We improve commerce in Oklahoma by supplying businesses with the highly skilled workers they need to excel in the modern marketplace. Oklahoma Technology Centers. We're taking education to stratospheric new heights.
