Overview

This study guide is designed to help students prepare for the Cabinetmaker Trainee assessment. It not only includes information about the assessment, but also the skill standards upon which the assessment is based, resources that can be used to prepare for the assessment, and test taking strategies.

Each of the four sections in this guide provides useful information for students preparing for the Cabinetmaker Trainee assessment.

- CareerTech and Competency-Based Education: A Winning Combination
- Cabinetmaker Trainee assessment
  - Assessment Information
  - Standards and Test Content
  - Sample Questions
  - Textbook/Curriculum Crosswalk
  - Abbreviations, Symbols, and Acronyms
- Strategies for Test Taking Success
- Notes

This assessment was developed and aligned with the National Center for Construction Education and Research (NCCER) Cabinetmaking modules. NCCER develops standardized construction and maintenance curricula and assessments with portable credentials. The assessment is also aligned to the National Association of Home Builders (NAHB) Residential Carpentry Standards which include key activities and knowledge required by all residential carpentry specialties. It also includes NAHB’s Applied Academic Skills, Safety Skills, and Basic Tool Knowledge.

The Cabinetmaker Trainee assessment measures a student’s ability to apply knowledge and skills in a cabinetmaking career. The Cabinetmaker Trainee assessment is structured to cover the same modules required by NCCER and determine a student’s ability to succeed on the NCCER cabinetmaking modules.

The Oklahoma Department of Career and Technology Education does not discriminate on the basis of race, color, national origin, sex/gender, age, disability, or veteran status. Inquiries concerning application of this policy may be referred to the ODCTE Compliance Coordinator, 1500 W. 7th Ave. Stillwater, OK 74074-4364, or call 1-800 522-5810 or (405) 377-2000.
CareerTech and Competency-Based Education: A Winning Combination

Competency-based education uses learning outcomes that emphasize both the application and creation of knowledge and the mastery of skills critical for success. In a competency-based education system, students advance upon mastery of competencies, which are measureable, transferable outcomes that empower students.

Career and technology education uses industry professionals and certification standards to identify the knowledge and skills needed to master an occupation. This input provides the foundation for development of curriculum, assessments and other instructional materials needed to prepare students for wealth-generating occupations and produce comprehensively trained, highly skilled employees demanded by the work force.

Tools for Success

CareerTech education relies on three basic instructional components to deliver competency-based instruction: skills standards, curriculum materials, and competency assessments.

Skills standards provide the foundation for competency-based instruction and outline the knowledge and skills that must be mastered in order to perform related jobs within an industry. Skills standards are aligned with national skills standards and/or industry certification requirements; therefore, a student trained to the skills standards is equally employable in local, state and national job markets.

Curriculum materials and textbooks contain information and activities that teach students the knowledge and skills outlined in the skills standards. In addition to complementing classroom instruction, curriculum resources include supplemental activities that enhance learning by providing opportunities to apply knowledge and demonstrate skills.

Certification Assessments test the student over material outlined in the skills standards and taught using the curriculum materials and textbooks. When used with classroom performance evaluations, certification assessments provide a means of measuring occupational readiness.

Each of these components satisfies a unique purpose in competency-based education and reinforces the knowledge and skills students need to gain employment and succeed on the job.

Measuring Success

Evaluation is an important component of competency-based education. Pre-training assessments measure the student’s existing knowledge prior to receiving instruction and ensure the student’s training builds upon this knowledge base. Formative assessments administered throughout the training process provide a means of continuously monitoring the student’s progress towards mastery.

Certification assessments provide a means of evaluating the student’s mastery of knowledge and skills. Coaching reports communicate assessment scores to students and provide a breakdown of assessment results by standard area. The coaching report also shows how well the student has mastered skills needed to perform major job functions and identifies areas of job responsibility that may require additional instruction and/or training.
Cabinetmaker Trainee Assessment Information

What is the Cabinetmaker Trainee assessment?

The Cabinetmaker Trainee assessment is an end-of-program assessment for students in cabinetmaking programs. The assessment provides an indication of student mastery of knowledge and skills necessary for success in careers in cabinetry.

How was the assessment developed?

The assessment was developed by the CareerTech Testing Center in alignment with the NCCER National Craft Assessment and Certification Program Specifications and NAHB Residential Carpentry Standards. A committee of industry representatives and educators validated the modules covered on the assessment. The assessment content was developed and reviewed by a committee of subject matter experts.

The committee assigned frequency and criticality ratings to each skill, which determines the significance of each task for test development:

Frequency: represents how often the task is performed on the job. Frequency rating scales vary for different occupations. The rating scale used in this publication is presented below:
1 = less than once a week  2 = at least once a week  3 = once or more a day

Criticality: denotes the level of consequence associated with performing a task incorrectly. The rating scale used in this publication is presented below:
1 = slight  2 = moderate  3 = extreme

What does the assessment cover?

Specifically, the test includes 55 multiple-choice test items over the following areas:

- Cabinetmaking Fundamentals 15%
- Stationary Power Equipment & Safety 27%
- Portable Power Equipment & Safety 18%
- Joinery & Fastening 7%
- Cabinetry Layout 7%
- Finish Preparation 4%
- Countertop Construction 6%
- Cabinet Assembly & Installation 15%
- European Cabinetmaking 1%

What are the benefits of using the assessment?

Students receive a certificate for each assessment that he/she passes. This certificate may be included in his/her portfolio and used to communicate the student's mastery of the subject matter to potential employers.

When should the assessment be taken?

The CareerTech Testing Center recommends that students take this assessment as soon as possible after receiving all standards-related instruction, rather than waiting until the end of the school year.
Is the assessment timed?

No. Although students may take as long as they need, most finish the assessment within one hour.

What resources can students use on the assessment?

Students are allowed to use calculators and scratch paper on CTTC assessments; however, these items must be provided by the testing proctor and returned to the proctor before the student’s exam is submitted for scoring. Calculator apps on cell phones and other devices may not be used on these assessments.

What accommodations can be made for students with Individualized Education Plans (IEPs)?

Accommodations are allowed for students with an Individualized Education Plan. Examples of allowable accommodations include:

- Extended time — This assessment is not timed; therefore, students may take as much time as needed to finish. The assessment must be completed in one testing session.

- Readers — A reader may be used to read the assessment to a student who has been identified as needing this accommodation.

- Enlarged text — Students needing this accommodation can activate this feature by clicking the \[ \text{AA} \] icon in the upper right corner of the screen.

What can students expect on Test Day?

All CTTC assessments are web-based and delivered exclusively by a proctor in the school’s assessment center. The proctor cannot be an instructor or anyone who was involved with the student during instruction.

Assessments are delivered in a question-by-question format. When a question is presented, the student can select a response or leave the question unanswered and advance to the next question. Student may also flag questions to revisit before the test is scored. All questions must be answered before the test can be submitted for scoring.

After the assessment is scored, the student will receive a score report that not only shows the student’s score on the assessment, but also how the student performed in each standard area.

Can students retake the test?

Students may retake the test unless their school or state testing policies prohibit retesting. Students who can retest must wait at least three days between test attempts.
Standards and Test Content

Cabinetmaking Fundamentals (8 questions)

1. Practice general cabinetmaking safety (3/3)
   • Cleanup
   • Shop habits
   • Clothing
   • Eyes
   • Hearing
   • Fire
   • Lifting
2. Interpret working drawings (3/3)
3. Identify cabinetmaking terminology, definitions, and abbreviations (3/3)
   • Parts of a cabinet
   • Standard sizes
   • Designs
4. Identify and select various kinds of woods and wood materials (2/2)
5. Identify cabinet components and hardware and describe their purpose (2/2)
6. Apply mathematical measurements (3/3)
   • Add
   • Subtract
   • Multiply
   • Divide
   • Geometry
   • Tape measure
   • Linear feet
   • Fractions
   • Decimals
   • Metrics
   • Square feet
   • Board feet
7. Use and maintain woodworking hand tools (3/3)
   • Hammer
   • Hand saw
   • Level
   • Screw driver
   • Chisel
   • Sharpening tools
8. Plan efficient materials use (2/3)
9. Estimate materials and costs (1/2)

Stationary Power Equipment and Safety (15 questions)

1. Demonstrate knowledge of types of stationary power equipment (3/3)
   • Safety
2. Identify, select, and use cutting tools (3/3)
3. Operate circular/table saws (3/3)
4. Operate radial-arm saws (3/3)
5. Operate band saws (3/3)
6. Operate scroll saws (3/3)
7. Operate jointers (3/3)
8. Operate surface planers (3/3)
9. Operate stationary sander (3/3)
10. Operate drilling machines (3/3)
11. Operate shapers (2/3)
12. Operate panel saws or panel router (3/3)
13. Operate bench grinder (2/2)
14. Operate special jointing machines (2/3)
   • Pocket cutter
   • Plate jointer
   • Mortise machine

**Portable Power Equipment and Safety (10 questions)**

1. Demonstrate knowledge of portable power tools (3/3)
   • Safety
2. Identify, select, and use portable electric power tools (3/3)
3. Operate portable circular saws (3/3)
   • Power miter box
4. Operate jig saws (3/3)
5. Operate portable sanders (3/3)
   • Belt
   • Finish
   • Orbital
6. Operate portable drills (3/3)
7. Operate routers (3/3)
8. Operate pneumatic tools (3/3)
9. Operate special jointing machines (3/3)
   • Pocket cutter
   • Mortise machine
   • Plate jointer
Joinery and Fastening (4 questions)

1. Identify various types of joints (2/3)
   - Butt
   - Dado
   - Doweled
   - Mortise and tenon
   - Spline
   - Tongue and groove
   - Miter
   - Rabbet
   - Plate
   - Pocket
   - Dovetail
   - Lap

2. Identify and demonstrate types of mechanical fastening methods (2/3)
   - Fasten parts with nails
   - Fasten parts with screws
   - Fasten parts with staples

3. Select and use adhesives (2/2)

4. Glue and clamp various joints (2/2)

Cabinetry Layout (4 questions)

1. Cut component parts of cabinets (3/3)
2. Cut component parts of face framing (3/3)
3. Cut component parts of doors (3/3)
4. Cut component parts of drawers (3/3)

Finish Preparation (2 questions)

1. Select and use various abrasives (2/3)
2. Prepare wood surfaces for finishes (2/3)
   - Clean surfaces
   - Remove excess glue
   - Sand surfaces
   - Swell dents
Countertop Construction (3 questions)

1. Identify plastic laminates and their uses (2/3)
2. Assist in the selection, layout, cutting, and application of plastic laminates (2/3)
   - Apply edge banding
   - Apply laminate to core
   - Apply wood edges
   - Cut plastic to size
   - Fit plastic laminate joints
   - Trim edges
   - Apply clamping devices
3. Assist with the installation of countertops: (2/3)
   - Laminate
   - Solid Surface
   - Granite
   - Stainless Steel
   - Marble

Cabinet Assembly and Installation (8 questions)

1. Assemble cabinet components (2/3)
2. Assemble and mount face frames (2/3)
3. Assemble drawer and door components (2/3)
4. Install door, drawer, and shelf hardware (2/3)
   - Install drawer rail and guides
   - Install hinges
   - Install pulls and knobs
   - Install track and slide for sliding doors
   - Install catches
5. Install moldings (2/2)
6. Set lower cabinets (2/3)
7. Hang upper cabinets (2/3)
8. Install adjustable shelves (2/3)

European Cabinetmaking Processes (1 question)

1. Demonstrate basic knowledge of 32mm cabinetmaking (1/2)
Sample Questions

1. What method of fastening is best for applying a stop block to a jig?
   a. clamp
   b. staple
   c. glue and screw
   d. brad and screw

2. The width of the cut made by a saw is also called the saw ____.
   a. thickness
   b. kerf
   c. angle
   d. set

3. What method is used to plan the cut-out for a kitchen sink?
   a. layout the approximate size of the hole
   b. place sink face-down to draw a line around the sink and cut on the outside of the line
   c. measure the exterior sizes of the sink and transfer the measurements to the countertop
   d. use a template to layout the required location for the sink

4. When installing a back in a cabinet, recesses are cut into two pieces of wood to form a ____ joint.
   a. butt
   b. dado
   c. miter
   d. rabbet

5. What type of joint is used for drawer construction?
   a. butt
   b. dovetail
   c. dowel
   d. miter

6. What is the proper way to lift an object?
   a. grasp the object with one hand
   b. tuck in your elbow and arms
   c. lift
   d. miter
7. What style of cabinet is designed without a face frame?

a. American
b. European
c. Traditional
d. Victorian
Sample Questions — Key

1. What method of fastening is best for applying a stop block to a jig?
   a. clamp  
       Wrong, but plausible
   b. staple  
       Wrong, but plausible
   c. glue and screw  
       Correct
   d. brad and screw  
       Wrong, but plausible

2. The width of the cut made by a saw is also called the saw ____.
   a. thickness  
       Wrong, but plausible
   b. kerf  
       Correct
   c. angle  
       Wrong, but plausible
   d. set  
       Wrong, but plausible

3. What method is used to plan the cut-out for a kitchen sink?
   a. layout the approximate size of the hole  
       Wrong, but plausible
   b. place sink face-down to draw a line around the sink and cut on the outside of the line  
       Wrong, but plausible
   c. measure the exterior sizes of the sink and transfer the measurements to the countertop  
       Wrong, but plausible
   d. use a template to layout the required location for the sink  
       Correct

4. When installing a back in a cabinet, recesses are cut into two pieces of wood to form a ____ joint.
   a. butt  
       Wrong, but plausible
   b. dado  
       Wrong, but plausible
   c. miter  
       Wrong, but plausible
   d. rabbet  
       Correct

5. What type of joint is used for drawer construction?
   a. butt  
       Wrong, but plausible
   b. dovetail  
       Correct
   c. dowel  
       Wrong, but plausible
   d. miter  
       Wrong, but plausible

6. What is the proper way to lift an object?
   a. grasp the object with one hand  
       Correct
   b. tuck in your elbow and arms  
       Incorrect by definition
   c. lift  
       Incorrect by definition
   d. miter  
       Incorrect by definition
7. What style of cabinet is designed without a face frame?

Curricula Crosswalk

Crosswalk to NCCER Modules, NAHB-HBI Residential Standards & Key Activities, and Curriculum and Instructional Materials (CIMC) Fundamentals Series

The following crosswalk is intended for guidance purposes only. It does not represent all curricula or resource materials that may be used for cabinetmaking programs. It is intended as a reference for curriculum planning and mapping standards to available curricula.

Curriculum/Resource Titles:

1) CIMC - Fundamentals of Construction  
2) CIMC - Cabinets, Shelves, and Built-Ins  
3) NCCER – Core Curriculum Trainee Guide  
4) NCCER – Cabinetmaking Trainee Guide  
5) NCCER – Carpentry Level 2  
6) NAHB/HBI – Residential Standards and Key Activities

For more information about CIMC curricula, please go to [www.okcimc.com](http://www.okcimc.com).

Test Taking Strategies

This section of the study guide contains valuable information for testing success and provides a common-sense approach for preparing for and performing well on any test.

General Testing Advice

1. Get a good night’s rest the night before the test — eight hours of sleep is recommended.
2. Avoid junk food and “eat right” several days before the test.
3. Do not drink a lot or eat a large meal prior to testing.
4. Be confident in your knowledge and skills!
5. Relax and try to ignore distractions during the test.
6. Focus on the task at hand — taking the test and doing your best!
7. Listen carefully to the instructions provided by the exam proctor. If the instructions are not clear, ask for clarification.

Testing Tips

1. Read the entire question before attempting to answer it.
2. Try to answer the question before reading the choices. Then, read the choices to determine if one matches, or is similar, to your answer.
3. Do not change your answer unless you misread the question or are certain that your first answer is incorrect.
4. Answer questions you know first, so you can spend additional time on the more difficult questions.
5. Check to make sure you have answered every question before you submit the assessment for scoring — unanswered questions are marked incorrect.
