Overview

This study guide is designed to help students prepare for the Laboratory Assistant assessment. It not only includes information about the assessment, but also the skills standards upon which the assessment is based and test taking strategies.

Each of the four sections in this guide provides useful information for students preparing for the Laboratory Assistant assessment.

- CareerTech and Competency-Based Education: A Winning Combination
- Laboratory Assistant assessment
  - Assessment Information
  - Abbreviations and acronyms used in the study guide and assessment
  - Standards and Test Content
- Strategies for Test Taking Success
- Notes

Equal Opportunity/Non Discrimination Statement

The Oklahoma Department of Career and Technology Education does not discriminate on the basis of race, color, national origin, sex/gender, age, disability, or veteran status. Inquiries concerning application of this policy may be referred to the ODCTE Compliance Coordinator, 1500 W. 7th Ave. Stillwater, OK 74074-4364, or call 1-800 522-5810 or (405) 377-2000.
CareerTech and Competency-Based Education: A Winning Combination

Competency-based education uses learning outcomes that emphasize both the application and creation of knowledge and the mastery of skills critical for success. In a competency-based education system, students advance upon mastery of competencies, which are measurable, transferable outcomes that empower students.

Career and technology education uses industry professionals and certification standards to identify the knowledge and skills needed to master an occupation. This input provides the foundation for development of curriculum, assessments and other instructional materials needed to prepare students for wealth-generating occupations and produce comprehensively trained, highly skilled employees demanded by the work force.

Tools for Success

CareerTech education relies on three basic instructional components to deliver competency-based instruction: skills standards, curriculum materials, and competency assessments.

Skills standards provide the foundation for competency-based instruction and outline the knowledge and skills that must be mastered in order to perform related jobs within an industry. Skills standards are aligned with national skills standards and/or industry certification requirements; therefore, a student trained to the skills standards is equally employable in local, state and national job markets.

Curriculum materials and textbooks contain information and activities that teach students the knowledge and skills outlined in the skills standards. In addition to complementing classroom instruction, curriculum resources include supplemental activities that enhance learning by providing opportunities to apply knowledge and demonstrate skills.

Competency Assessments test the student over material outlined in the skills standards and taught using the curriculum materials and textbooks. When used with classroom performance evaluations, written competency assessments provide a means of measuring occupational readiness.

Each of these components satisfies a unique purpose in competency-based education and reinforces the knowledge and skills students need to gain employment and succeed on the job.

Measuring Success

Evaluation is an important component of competency-based education. Pre-training assessments measure the student’s existing knowledge prior to receiving instruction and ensure the student’s training builds upon this knowledge base. Formative assessments administered throughout the training process provide a means of continuously monitoring the student’s progress towards mastery.

Written competency assessments provide a means of evaluating the student’s mastery of knowledge and skills. Coaching reports communicate competency assessment scores to students and provide a breakdown of assessment results by standard area. The coaching report also shows how well the student has mastered skills needed to perform major job functions and identifies areas of job responsibility that may require additional instruction and/or training.
Laboratory Assistant Assessment Information

What is the Laboratory Assistant assessment?

The Laboratory Assistant assessment is an end-of-program assessment for students who have completed a Laboratory Assistant program. The assessment provides an indication of student mastery of knowledge and skills needed to succeed as a pharmacy technician.

How was the assessment developed?

The assessment was developed by the CareerTech Testing Center. Items were developed and reviewed by a committee of subject matter experts.

What does the assessment cover?

Specifically, the tests include multiple-choice test items over the following areas:

Laboratory Assistant (65 questions)

General Laboratory Safety 12%  Laboratory Techniques I 19%
Scientific Mathematics 18%  General & Inorganic Chemistry 31%
Professional Support Skills 5%  Organic Chemistry 12%
Lab Glassware and Equipment 3%

What are the benefits of using this assessment?

Students receive a competency certificate for each assessment that he/she passes. This certificate may be included in his/her portfolio and used to communicate the student’s mastery of the subject matter to potential employers.

When should the assessment be taken?

The CareerTech Testing Center recommends that students take this assessment as soon as possible after receiving all standards-related instruction, rather than waiting until the end of the school year.

Is the assessment timed?

No. Although students may take as long as they need, most finish the assessment within one hour.

What resources can students use on these assessments?

Students are allowed to use calculators and scratch paper on CTTC competency assessments; however, these items must be provided by the testing proctor and returned to the proctor before the student’s exam is submitted for scoring. Calculator apps on cell phones and other devices may not be used on these assessments.
What accommodations can be made for students with Individualized Education Plans (IEPs)?

Accommodations are allowed for students with an Individualized Education Plan. Examples of allowable accommodations include:

- Extended time — This assessment is not timed; therefore, students may take as much time as needed to finish. The assessment must be completed in one testing session.
- Readers — A reader may be used to read the assessment to a student who has been identified as needing this accommodation.
- Enlarged text — Students needing this accommodation can activate this feature by clicking the AA icon in the upper right corner of the screen.

What can students expect on Test Day?

All CTTC assessments are web-based and delivered exclusively by a proctor in the school’s assessment center. The proctor cannot be an instructor or anyone who was involved with the student during instruction.

Assessments are delivered in a question-by-question format. When a question is presented, the student can select a response or leave the question unanswered and advance to the next question. Students may also flag questions to revisit before the test is scored. All questions must be answered before the test can be submitted for scoring.

After the assessment is scored, the student will receive a score report that not only shows the student’s score on the assessment, but also how the student performed in each standard area.

Can students retake the test?

Students may retake the test unless their school or state testing policies prohibit retesting. Students who can retest must wait at least three days between test attempts.
Standards and Test Content

General Laboratory Safety (12 questions)

1. Describe proper dish washing technique for chemical glassware
2. List the errors that may be caused by unclean glassware
3. Describe the disposal of laboratory clean-up materials and tools
4. Identify the need for various safety equipment
5. Identify the use of safety equipment
6. Demonstrate the operation of laboratory safety equipment
7. Define the chemical hazard communication program for laboratories
8. Define the various labeling programs and their focus
   - NFPA, HMIS, DOT, ANSI
9. Identify the parts and uses of a SDS
10. Demonstrate the proper storage, handling and disposal of various chemicals
    - Inorganic, Organic, chlorinated chemicals, flammable, corrosive
11. Describe clean-up procedures used for flammable, corrosive and organic materials
12. Define the appropriate industrial hygiene practices for a chemical, based on its MSDS
13. Describe the major physical hazards in the lab
14. Use appropriate safety equipment for protection from physical safety hazards
15. Explain the expected safety behavior for carrying chemicals or climbing in the lab

Scientific Mathematics (12 questions)

1. Perform basic addition, subtraction, multiplication and division operations
2. Manipulate whole numbers, fractions and decimals
3. Apply problem-solving techniques to word problems
4. Simplify basic algebraic equations to solve for x
5. Solve problems involving ratio and proportion
6. Express numbers in scientific notation
7. Manipulate numbers expressed in scientific notation back to simple numbers
8. Determine the correct number of significant figures in given values
9. Manipulate values expressing the results in the correct significant figures
10. Define and demonstrate the relative size of units in the metric system
11. Measure distance, area, volume, and weight in English and metric units
12. Manipulate data between English and metric systems
13. Manipulate data within the metric system
14. Convert temperature units between different temperature systems
15. Set up and solve mathematical problems involving percent and proportions
16. Perform calculations on parts per million and similar concentrations
17. Manipulate values between various types of concentrations
18. Describe the units involved in concentrations of molarity, normality, ppm and ppb
19. Describe the factors necessary to perform statistical calculations on sample data
20. Perform standard statistical calculations on sets of data
21. Describe the use of values generally calculated from statistical sample data
22. Identify the probable sources of data sets generated in the laboratory
23. Describe the use of statistics and control charts in the work place
24. Identify outliers and hypothesize their causes and corrective action
25. Identify the probable sources of data sets generated in the laboratory
26. Define the differences in qualitative and quantitative measurements
27. Define the differences in precision, accuracy and random data

**Professional Support Skills (3 questions)**

1. Understand the purpose and structure of a laboratory data book
2. Understand the purpose and structure of a chain of custody
3. Define the basics of technical writing skills
4. Demonstrate the use of reality checks on data and results
5. Interpret graphs and the trends in data
6. Develop standard curves and evaluate using equation for a line
Lab Glassware and Equipment (2 questions)

1. Explain the sensitivity and care of equipment and glassware
2. Demonstrate proper use of balances
3. Demonstrate reading volume in glassware
4. Identify and use the proper glassware to deliver and contain specific volumes
5. Identify common glassware and utensils used in the laboratory
6. Describe the use of laboratory glassware and utensils
7. Identify the meaning of the abbreviations on the lab ware
8. List the analysis with which each piece of equipment may be associated
9. Identify the common electrical heating equipment used in the laboratory
10. Demonstrate the use of common heating equipment
11. Describe the safety and procedures involved in the use of flame

Laboratory Techniques I (12 questions)

1. Record the weight of chemical powders and liquids
2. Demonstrate volumetric dilution of solutions
3. Calculate percent and ppm concentrations of solutions
4. Demonstrate use of significant figures in volumetric dilutions
5. Describe math and use of simple centrifugation
6. Describe math and use of simple filtration
7. Describe math and use of simple evaporation
8. Analyze and evaluate the results for statistics and error
9. Demonstrate the use of viscosity equipment
10. Demonstrate the use of conductivity meters
11. Demonstrate the use of turbidity meters
12. Perform calculations associated with small lab equipment
13. Demonstrate proper use of magnetic stirrers and hot plates
14. Explain the operation of a colorimeter
15. Construct a standard curve from colorimeter data
16. Determine unknown sample results from a standard curve and the equation for a line
General & Inorganic Chemistry (20 questions)

1. Differentiate between physical and chemical properties of matter
2. Identify the symbols for the common elements
3. Identify elements, compounds, and mixtures by their properties
4. Describe the structure of the atom and its effect on molecular formulas
5. Describe the order and use of the Periodic Table
6. Identify different chemical reactions
7. Write and balance chemical equations for simple reactions
8. Name and write formulas for binary and polyatomic inorganic compounds
9. Name and write formulas for binary molecular compounds
10. Identify between ionic and molecular compounds
11. Use the mole concept to convert between moles and grams
12. Calculate and use formula weights and molecular weights
13. Define the pH scale
14. Describe the different techniques for measuring pH
15. Describe the operation of a pH meter
16. Explain the use of indicators
17. Properly read a buret
18. Describe how manual acid/base titration is performed
19. Calculate molarity using the standard titration calculation

Organic Chemistry (8 questions)

1. Describe the importance of carbon as the basis for organic chemistry
2. Draw the structural formulas for the simplest carbon compounds: alkane, alkene, alkyne
3. Draw the most common functional groups
5. Identify organic chemical names from their structural formulas, using IUPAC
6. Identify the structural formulas of organic chemicals from their IUPAC names
7. Identify non-IUPAC naming conventions
8. Describe the industry operations that refine aliphatic hydrocarbons
9. Define ‘fossil fuel’
Symbols and Acronyms

Symbols

% Percent
C Celsius
F Fahrenheit
g Gram
L Liter
M Molarity
mg Milligram
mL Milliliter
oz Ounce
pH Phenyl
ppm parts per million

Acronyms

ABS Acrylonitrile butadiene styrene
ASTM American Society for Testing and Materials
CRC (Handbook) Handbook of Chemistry and Physics
EPA Environmental Protection Agency
HEPA High-efficiency particulate arrestance
IUPAC International Union of Pure and Applied Chemistry
NFPA National Fire Protection Association
PDR Physicians Desk Reference
SDS Safety Data Sheet
TDS Total Dissolved Solids
TSS Total Suspended Solids
Test Taking Strategies

This section of the study guide contains valuable information for testing success and provides a common-sense approach for preparing for and performing well on any test.

General Testing Advice

1. Get a good night’s rest the night before the test — eight hours of sleep is recommended.
2. Avoid junk food and “eat right” several days before the test.
3. Do not drink a lot or eat a large meal prior to testing.
4. Be confident in your knowledge and skills!
5. Relax and try to ignore distractions during the test.
6. Focus on the task at hand — taking the test and doing your best!
7. Listen carefully to the instructions provided by the exam proctor. If the instructions are not clear, ask for clarification.

Testing Tips

1. Read the entire question before attempting to answer it.
2. Try to answer the question before reading the choices. Then, read the choices to determine if one matches, or is similar, to your answer.
3. Do not change your answer unless you misread the question or are certain that your first answer is incorrect.
4. Answer questions you know first, so you can spend additional time on the more difficult questions.
5. Check to make sure you have answered every question before you submit the assessment for scoring — unanswered questions are marked incorrect.
