*Chart compares IDEA services at high school to Section 504/ADA services at the postsecondary level.*
Points to Remember about Postsecondary Education

- Your child will have to self disclose his/her disability if he/she wants to receive accommodations.
- A free appropriate public education no longer applies. Some institutions/programs/career majors are competitive, and not all students are accepted.
- There are no individualized education programs.
- Your child will be responsible for his/her academic success.
- If your child meets the essential requirements for admission, a postsecondary school cannot deny your child admission simply because he/she has a disability.

Questions to Ask Yourself

- How well does my child understand his/her disability?
- Does my child know his/her strengths and weaknesses?
- Can my child verbally express what accommodations he/she needs?

Questions to Ask Postsecondary School

- Who is the disability contact on campus?
- What disability documentation does the school need for my child to receive accommodations?
- What resources are available on campus (writing centers, academic centers, medical clinic, transit services, etc.)?
Planning Ahead for Changes and Challenges

• **Change in environment** - Your child will not only change physical locations but will also change time structures and will need to learn new routines.

• **Self Advocacy** - Your child will need to know how to advocate for what he/she needs.

• **Self Discloser** - If your child needs accommodations, he/she will need to self disclose his/her disability and seek out services.

• **Support** - Academic support methods will change. Your child will no longer be provided with modifications (he/she was in high school). Make sure your child understands this and is prepared for this change.

• **Find Area Support** - Think ahead about what supports your child might need (transportation, equipment repair, personal assistant, etc).

What is the difference between accommodations and modifications?

**Accommodations**— An accommodation does not alter what the student is expected to learn. An accommodation makes learning accessible to the student and allows the student to demonstrate what he/she knows. Examples: Extended time, tests in separate location, preferential seating, adaptive furniture, large print texts.

**Modifications**— A modification does alter content knowledge expectations. Examples: Limit the number of distracters on test items, simplify wording on assignments and tests, lowered performance expectations related to educational standards.
• Beginning when your child is young, talk to your child about the importance of postsecondary school.

• Work with your child’s IEP team to create a good transition plan that consists of activities that will help prepare your child for postsecondary education.

• Make sure your child has current testing information that a college may need. If current testing does not exist, encourage the IEP team to conduct updated testing before your child graduates from high school.

• Take your child to visit a few colleges.

• Have your child practice disclosing his/her disability and asking for needed accommodations.

• Request accommodations for your child on the ACT or SAT exams (if needed). Your local school counselor or special education teacher can help you with this.
