

EXPLORE

DIGITALTEACHING AND LEARNING THROUGH THE ISTE STANDARDS

As an educator, one of our goals is to empower students so they can be critical thinkers and learn for themselves. This course allows educators the opportunity to explore the International Society for Technology in Education (ISTE) Standards for Educators and Standards for Students. Participants will unpack the Standards for Educators and self-assess their level of engagement in activities aligned to the standards and/or indicators. Participants will also review Standards for Students and use the indicators to write performance tasks for each, based upon appropriate content and grade level for which participants teach. **Registration is required.**

Date & Time	Delivery Mode & Location	Registration
