Focused Field of Study Advanced Placement Certification Document

The Oklahoma State Department of Career and Technology Education (ODCTE) believes that each of its programs must develop an industry and community specific curriculum for all courses in a college/career ready pathway. The Focused Field of Study STEM pathways prepare secondary students to be successful at the college level.

The ODCTE-STEM Focused Field of Study programs use AP mathematics and science courses to ensure rigorous advanced level instruction. Following College Board's AP® Program, rather than mandating curriculum for AP courses, ODCTE requires AP instructors to participate in an AP Course Audit. These courses are to be taught on a college-level.

The following Oklahoma Career and Technology Education instructor(s) has/have submitted an electronic copy of his/her syllabus outlining the course of study to be followed to AP Course Audit. If an instructor has not been hired at the time of submission of the Focused Field application, an AP Sample Syllabus for that subject will be submitted to AP Course Audit for approval.
